

TWO-WAY COMMUNICATION IN HIGH NOISE AREAS

People struggle with two-way radio communication in high noise areas. The **Noise-Ban Communicator** is a hands-free two-way communication solution for clear communication in high noise. It connects the two-way radio to the earpiece, allowing the user to hear the two-way radio directly in the ear. The user is able to talk back through a microphone that is built into the earpiece, using an external PTT (Push-to-talk).

BENEFITS & FEATURES

- Generic or Custom-made earpiece option available
- Two-way communication via the ear
- Excellent speech intelligence
- Comfortable
- Easy to combine with protective clothing, such as helmets, gas masks and other safety gear
- Makes hands-free use possible
